Welcome!

Ways Buck

Satisfy your crave anytime anywhere

What is Ways Bucks

Delivery Service

Deliver anywhere just a click away

Online

No need to go outside

Easy and Customizable

Easy to use and customize your order as you wish

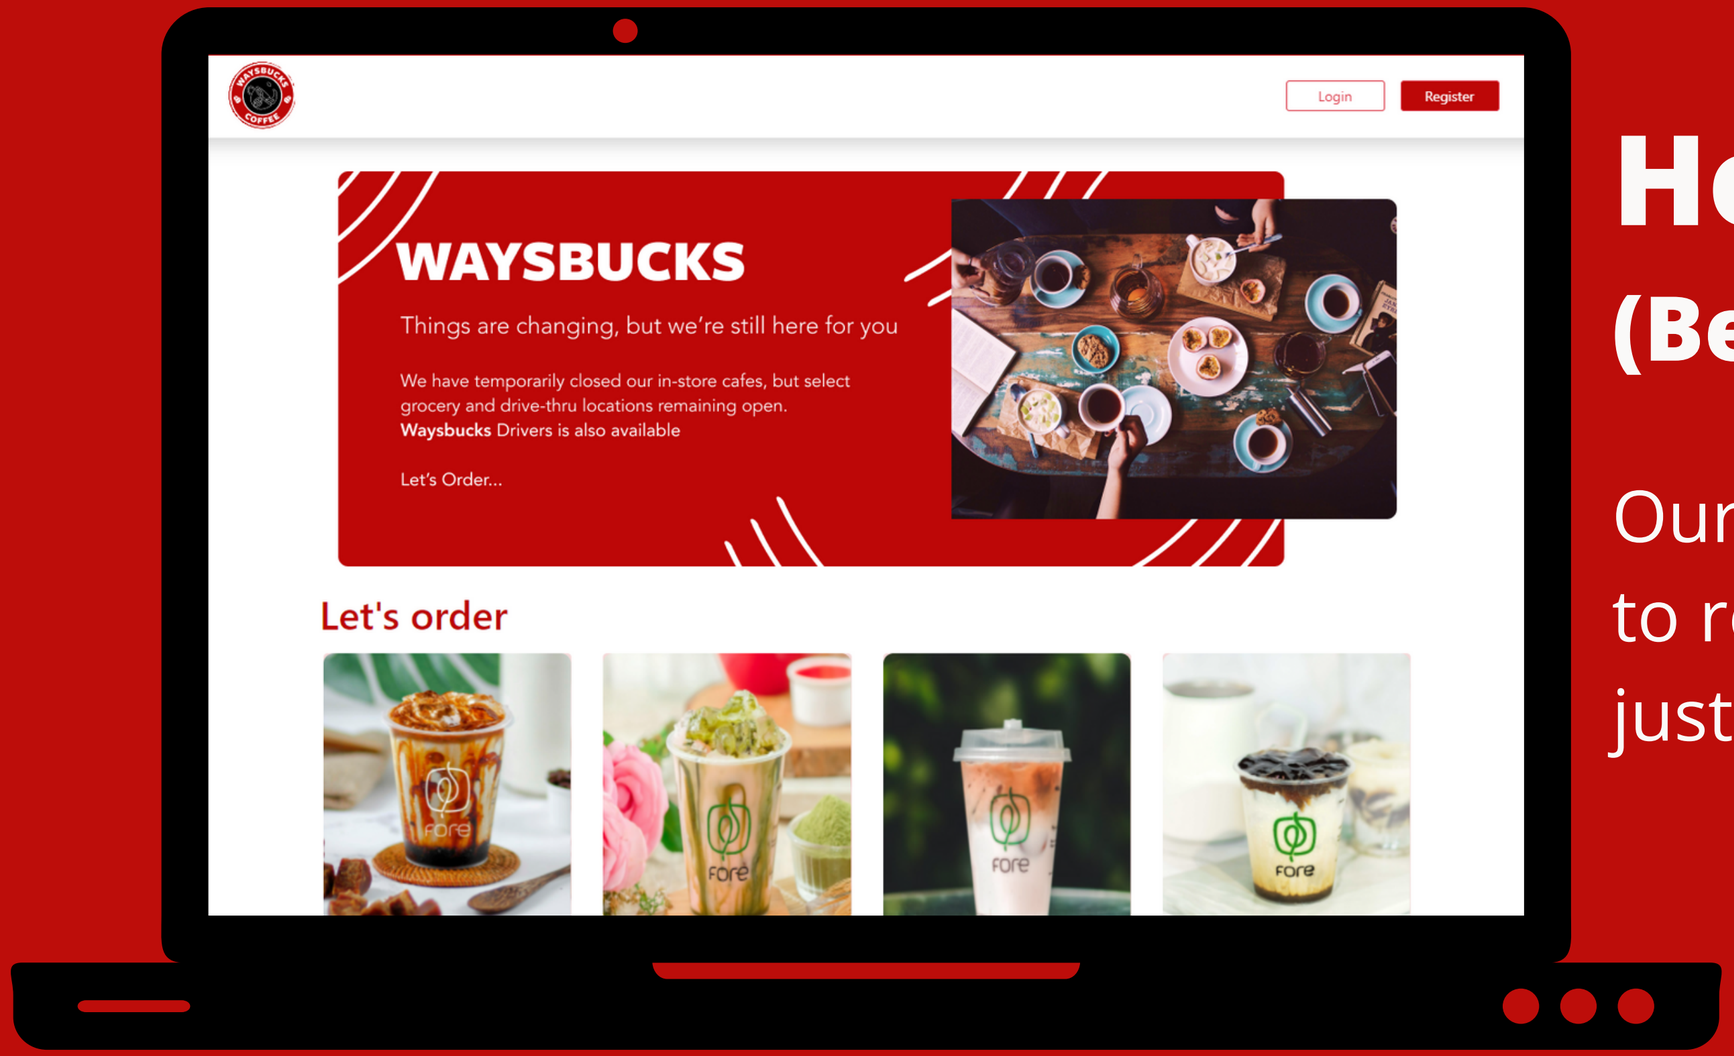
Progress

70%

Tools and Library

Here are some tools and Library i pick to build Ways Bucks

- Visual Studio Code
- ReactJs
- ES7 React/Redux/GraphQL/ React-Native snippets
- React Bootstrap
- Babel Javascript
- React Router DOM
- Prettier - Eslint



Home Page
(Before Login)

Our primary theme is red to represents energy, just like coffee..

Business Logics

How it works

- React Context handle and manage application state
- User credential and product data stored on localStorage so become non-volatile (for dev build)

1. User Login and the apps checks if user is a customer or admin and redirect them to Landing Page
2. Navbar menu will correspond with user role wheter is user or admin
3. User can order any beverage with any toppings and saved to cart using state

Difficulties

- Data manipulation, comparing data from JSON and localStorage
- There's a few bug for example empty user token will trigger error

DEMO

Buckle up

Thank you for coming!
